The photo is of a quadruple register. Up to four wx elements could be continuously recorded on the weekly chart. Each shoreside aerological office would normally be equipped with it. Of interest, in a photo of aerology in USS WRIGHT (AV-1) that I once eyeballed there was a quad register – she was homeported Pearl and moored alongside NAS Ford Island – very close to shore duty,

This was one of the instruments that my Class 20 Primary Aerog School became familiar with. Aerog1/c Don White was our instructor on 2nd deck of NAS Lakehurst aerology where there was an instrument lab.
